Nyakyusa

CHAPTER XIII

TWENTY YEARS' CHANGE

How does Christianity interact with other revolutionary forces in the community? It has been possible to observe the changes that have taken place among the Nyakyusa after a lapse of twenty years, and a summary of them is necessary before we proceed to a discussion of the links between religious and secular change.

The first thing that strikes a visitor returning to Nyakyusa country after many years, is that the isolation, which was so typical of the valley, has greatly diminished. Buses, filled with Nyakyusa passengers, cross twice daily the high pass that leads out of the valley, and where once travellers died of exposure and starvation there is a hard road fringed with homesteads and fields. The belt of unoccupied country that even twenty years ago separated the Nyakyusa from their neighbours has disappeared, for they themselves have spilled out of the valley to the north and west, and their Kinga neighbours have come down the Livingstone escarpment to the east and cultivate the mountain slopes, for 'they no longer fear that people (i.e. the Nyakyusa) will seize their property'. Men travel abroad to find work and they go much farther and stay away longer than before. In the remotest village there is some man who has visited Burma or Malaya as a soldier, and a dozen lads who will argue the relative merits of the Orange Free State gold mines and the Copper-belt as centres of employment. Many women now accompany their husbands to Rhodesia, or other parts of Tanganyika, and some travel to visit daughters or sisters. The older women enlarge on their journeys and joke about how fearful they used to be.

Travel implies learning another language, most often Swahili, but also Bemba and English and the pidgin of the gold and copper mines called Fanakalo. Thus intellectual isolation is disappearing along with the physical isolation. The numerous 'bush schools' which existed in the Nyakyusa valley in 1938, and at which many of those who attended never even learnt to read and write, have been largely replaced by mission primary schools, state-aided and inspected, and in these and the Native Authority primary and middle schools there are now 9,437 pupils, as against about 500

WANYAKYUSA AGRICULTURE

By D. H. Thwaites, Agricultural Assistant, Tanganyika Territory

131 The Wanyakyusa occupy the District of Rungwe in the Southern Highlands Province. The district lies between 9° and 9½° S. latitude at the northern tip of Lake Nyasa. The altitude 133 ranges from 1,500 feet to 9,500 feet. The 631 district is divided into twelve chiefdoms. The Administrative Headquarters are at Tukuyu, which was known before the British occupation as Neu Langenberg.

Inhabitants

101 The local people are not indigeneous to this area. They came, tradition has it, from [173] Mahenge via Ukinga after many tribal fights. They are akin to the Wahenga in Nyasaland bordering on the Tanganyika boundary. It is ●191 estimated that only 10 per cent of the Wanyakyusa speak Kiswahili. According to the 1935 161 census the total poulation was 153,204. The 162 total number of tax-payers in 1942 was 35,304, or 23.04 per cent of the total population.

181 The people themselves are extremely industrious and intelligent. As there are 90 people to the square mile, living conditions are 105 crowded and emigration is continually taking place. The people are partial to litigation over cattle and women. The number of cases heard annually in the Native Courts is about 6,000. There is no one historical and traditional head of the tribe. The twelve Chiefs are, in reality, hereditary Headmen who have been selected by Government to be Chiefs. They are in effect only *primi inter pares* in native eyes, the outlook of the people being unusually democratic for a native tribe.

105 The people live in houses made of wattle and daub or bamboo frame, with thatched 342 roof, and villages are sited mostly along ridges. 341 Rectangular houses are now built instead of the round huts of former days. They often stand in rows with a main street down the middle with bananas in the background. The more progresaive natives build with sun-dried or burnt brick. Stock are stalled in the same house owing to the prevalence of thieving, but sleep in separate rooms.

Climate

132 The rainfall of the district varies in the different areas. In Tukuyu itself the annual average for 25 years (1918-1942) is 100.22 inches. On the Lake shore the average is probably higher, but no continuous statistics are available. The heaviest rainfall months are from December to May, but, in most years,
